

“ALUMINUM ALLOY IS BETTER THAN COPPER”

WE'RE NOT JUST FEEDING YOU A LINE.

FACTS ARE FACTS.

STABILOY® Aluminum Alloy Feeder Cables carry twice the ampacity per pound as copper. They're also 25% more flexible, with 40% less springback. STABILOY Aluminum Alloy feeders have superior resistance stability at high temperatures, with virtually no creep, which provides greater connection reliability for your installations.

Manufactured by Alcan Cable, an industry leader, STABILOY is an aluminum alloy purposely engineered using other metals to impart thermal stability and creep resistance. At about half the weight of copper, it delivers

exceptional performance at a much lower installed cost for material and labor. That is a value you just cannot afford to pass on in this day and age.

Of course, every STABILOY Aluminum Alloy feeder cable is 100% tested to ensure safety, durability, and reliable performance.

Don't let anyone tell you otherwise — copper is no substitute for STABILOY Aluminum Alloy feeders.

For your peace of mind and a boost to your bottom line, specify and install superior performing STABILOY Aluminum Alloy feeder cable on your next installation. You'll be glad you did!
